The Cruise America Child Seat Set Up

Pictures are from a C25 dinette seat, but the same on compact and large RV layout-with backrest removed showing lap belts and tethers. Depending on the size of the child, it may be necessary to fix the dinette in the lower position, i.e., bed, while traveling. For example: sometimes, the child might be too big for his legs to fit comfortably under the table; therefore, it can be an idea to lower the table.

Car seat should have something similar to the above fasteners. Thin buckle to attach to tether. Thicker fasteners will not attach.
